PROJECTS

Websites to mimic an online store, personal website, forms

Jan-Apr. 2022

Seneca College

North York, ON

- Used HTML5, CSS stylesheets, CSS box models, flexbox
- Wrote JavaScript functions, event handlers, made DOM API calls to manage dynamic content
- Designed forms, used POST, field validation using regex and JavaScript

C++ program to mimic management of inventory items [[GitHub](#)]

Apr. 2022

Seneca College

North York, ON

- Coded an abstract base class and two derived classes to represent perishable and non-perishables
- Used dynamic memory allocation and clean up, tested for memory leaks with valgrind
- Used virtual functions, overloading, shadowing
- Read and wrote to a file

Python scripts for animation in Autodesk Maya

Aug. 2021

3D Animator, Guru Studio

Toronto, ON

- Coded and presented scripts to a group of animators
- Scripts saved animators time by automatic repetitive tasks
- Scripts allowed animators to save/load data, and allowed for easy selection of various parts of the 3D models

Python scripts for animation in Autodesk Maya

Feb. 2018

3D Animator, DHX Studios

Halifax, NS

- Was requested to build a tool for animators to use on an upcoming project, Rev & Roll
- Tool allowed animators to select parts of each 3D model, and automated some repetitive tasks
- Designed and presented the tool to a large team of animators
- Tool was versatile and was later used by animators on multiple projects
